

Packet Tracer network proposal for ICPC

Authors: José Luis Madrigal Sánchez, Sebastián Burgos Alanís, Alan Said Martínez Guzmán, David Damián Galán

Here is the proposal, where the requirements were having 6 teams with variable quantities and a minimum of 30 members. Of course, this is just a general view, because in the implementation there will be more PCs so we will need more switches. The part of the top with the DNS was given by our training partner, which was Tec de Monterrey.

We established configurations like passwords for modes, DHCP for addressing, OSPF for routing, VLANs, router on a stick, etc. I must mention that this was an introductory course, so many things like security aren't included yet.

Now we can see a ping test from a PC of a team to a judge PC and then to the DNS server.
